### Double Glass Safety

The U70 has a second layer of ultra clear glass that provides a layer of surface protection between your fireplace and your loved ones.

### No Steel Pillars

Instead of obstructing the corners of the glass firebox with thick metal beams, the U70 uses a glass to glass seal that lets you enjoy the fire from any angle.

### No Gaps in Glass

Rather than using pegs that create an unsightly gap towards the bottom of the glass, the U70 is designed with a seamless top-to-bottom construction with no rattle.
